

## DJI Modify Known Issue List

Release Date: 2024-01-18

DJI Modify Version: v1.0.0

No.	Issue Description	Impact and Workaround
1	When flattening a surface on the edge of a model block, curling issues may occur.	When flattening across model blocks, it is recommended to select edge areas with similar heights for flattening to help minimize edge warping.
2	Occasional texture errors may occur when flattening a large surface.	The texture repair tool can be used to fix areas with texture errors.
3	Moving the folder or file where a DJI Modify project is located or changing the project name in DJI Terra can result in the DJI Modify project becoming inaccessible.	Avoid modifying the folder or file location.
4	After repairing the water surface,	The gaps can be repaired using

## DJI Modify Known Issue List

	gaps will appear at the junction between the water surface and the original model.	flattening and texture repair tools.
5	Vehicle recognition produces inconsistent results for vehicles from different viewing angles.	Make sure that the vehicles are clearly visible on the screen for better recognition results.
6	Tunnel-like holes with a certain thickness cannot be automatically detected.	It is recommended to use the custom hole-filling tool to delete certain meshes to generate holes first, and then proceed with the necessary modifications.

\*The above issues will be addressed and fixed in later versions.
