

FAT SHARK DOMINATOR

WARNING: DO NOT leave the headset exposed to direct sunlight. Sunlight will magnify through the optics and burn holes in the OLED color filter. Damage from sunlight will not be covered under warranty. Keep goggles in protective case when not in use.

WARNING: Always operate this product in a safe and responsible manner and observe local laws.

WARNING: The Dominator by Fat Shark is not a toy. This product contains small parts and is intended to be operated by adults. Not for children under 14 years old.

Dominator Digital Headset User Manual

Rev. 270622(DDMMYY)

THIS HEADSET INCLUDES

1	#1125 Dominator Headset
1	Carrying Case
1	Head Strap
1	XT-60 Battery Adapter
1	Lens Cleaning Cloth

ANTENNAS AND BATTERY REQUIRED, NOT INCLUDED

2	5.8GHz RP-SMA Directional or Omni Antenna
2	5.8GHz RP-SMA Omni Antenna
1	Headset Battery

DOMINATOR HEADSET SPECIFICATIONS

DISPLAYS:

Dual Full HD 1080p OLED displays

FIELD OF VIEW (FOV):

46°

HEADSET ADJUSTMENTS:

Inter-Pupillary Distance (IPD): 57–70mm

Adjustable Focus Range: +2 to -6 diopter

HEADSET INTERFACE

- 2 top buttons (enter, record start/stop)
- 5 way switch (menu navigation)
- 1 bind button (recessed - insert tool to press)
- 1 power button (mechanical press on/ press off)

HEADSET OUTPUT:

USB-C (HDMI)

INPUT POWER:

5.5mm Barrel Connector, 7–21V Center Pin Positive

SD CARD SLOT

Micro sized SD card reader for recording video and firmware updates

ANTIFOG FAN

Slide vent for control

ANTENNAS (REQUIRED, NOT INCLUDED)

4 RP-SMA (top for omni antennas, front for omni or directional antennas)

OPERATING FREQUENCIES:

5.725–5.850GHz

WEIGHT:

315 g

OPERATING TEMPERATURE:

32°–104°F (0°–40°C)

COMPATIBLE VIDEO TRANSMITTER PROTOCOL:

Avatar HD

BUTTON CONTROLS

5-WAY SWITCH

Press the 5-way switch in the center, or up/down/left/right for different functions from the button.

Button	Input	Action	
Back	Short press	Back one level	Escape
Record	Short press	Start/stop video recording	
5-Way Switch	Press center	Enter	Pause/play
	Press up	Menu up	
	Press down	Menu down	
	Press left	Menu left	
	Press right	Menu right	

LINKING

Linking is the process of pairing the video goggles with the video transmitter. You will need to complete the linking process in order for the goggles to receive video from the transmitter. You can link multiple transmitters to the same set of goggles.

1. Power ON the goggles. Wait for the goggles to display the main standby screen.
2. Power ON the video transmitter. Wait for the LED to blink green.
3. Press the link button on the video transmitter, the LED on the video transmitter turns red.
4. Use a tool to press the link button on the goggles; they will beep to indicate link mode.
5. When linking is complete, the goggles will stop beeping and the LED on the transmitter will turn green.

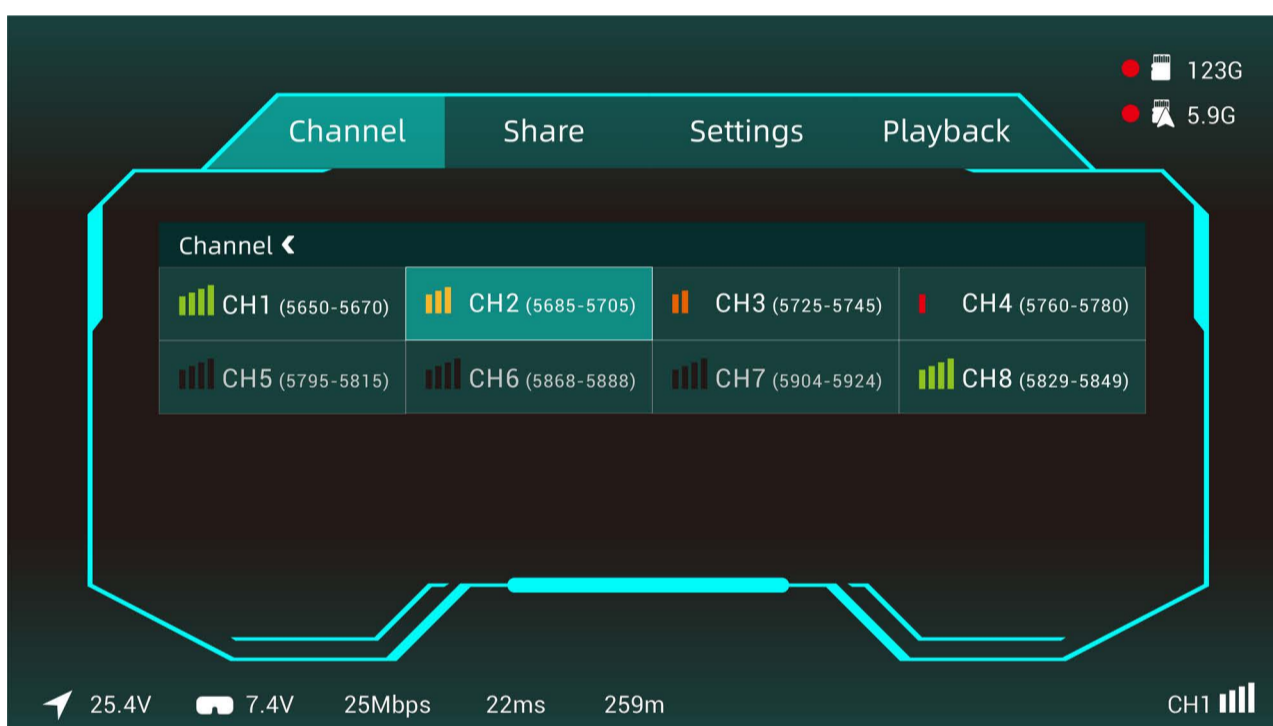

After linking the video transmitter will operate under these conditions

- The transmitter will not send a video signal unless the goggle it is linked to is turned on.
- The transmitter will power up and transmit on the channel selected at the goggle.
- By default, the Public Channel will be selected. This channel should not be used for flying your drone and should only be used to select a channel for operation.
- The system may prevent you from selecting channels currently in use by other pilots.
- Once you have selected a channel, the goggle and transmitter will go to your selected channel on future power ups.
- If your previously selected channel is occupied by another pilot while your system is not powered up, the system may default back to Public Channel and prompt you to pick a different channel.

BETAFLIGHT SETUP

CANVAS MODE (BETAFLIGHT)

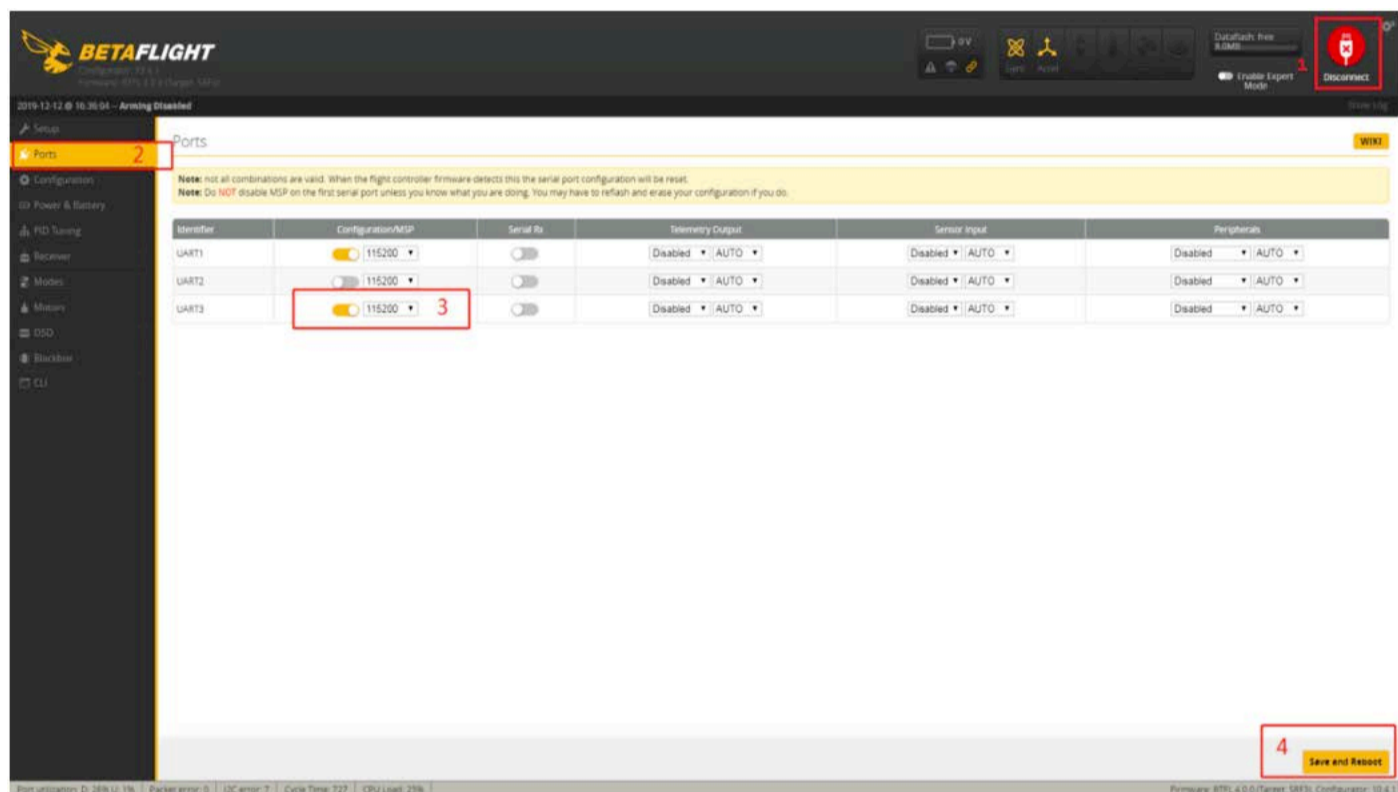

Currently only Betaflight supports msp_displayport. Do not attempt to perform this CLI update on INAV. Please make sure that the FC firmware version is the latest version of BetaFlight. The current (2021/03/12) is version 4.2.8. For a better experience, please wait for the release of version 4.3.0.

1. Connect VTX UART to FC's serial port, such as UART3.
2. In the Ports interface, turn on the MSP function corresponding to the Identifier (UART3), the baud rate is 115200, Save and Reboot.
3. After opening the CLI, make the following settings:
 - A. Set osd_device to msp:
set osd_displayport_device = MSP
 - B. Specify the serial port of msp_displayport as 2 (the number in this place should be the serial port number minus 1):
set displayport_msp_serial = 2
 - C. Save and exit:
save

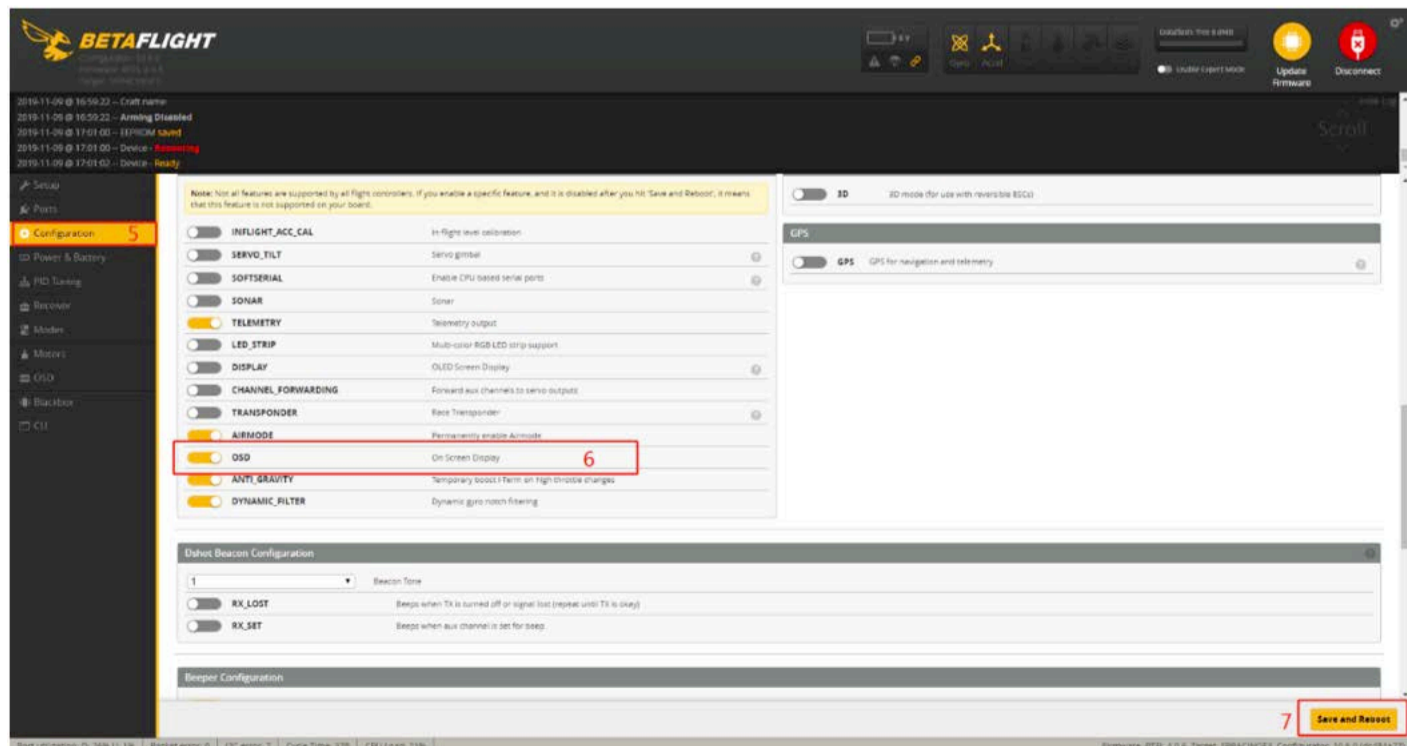

The setup is complete.

OSD SETUP (BETAFLIGHT)

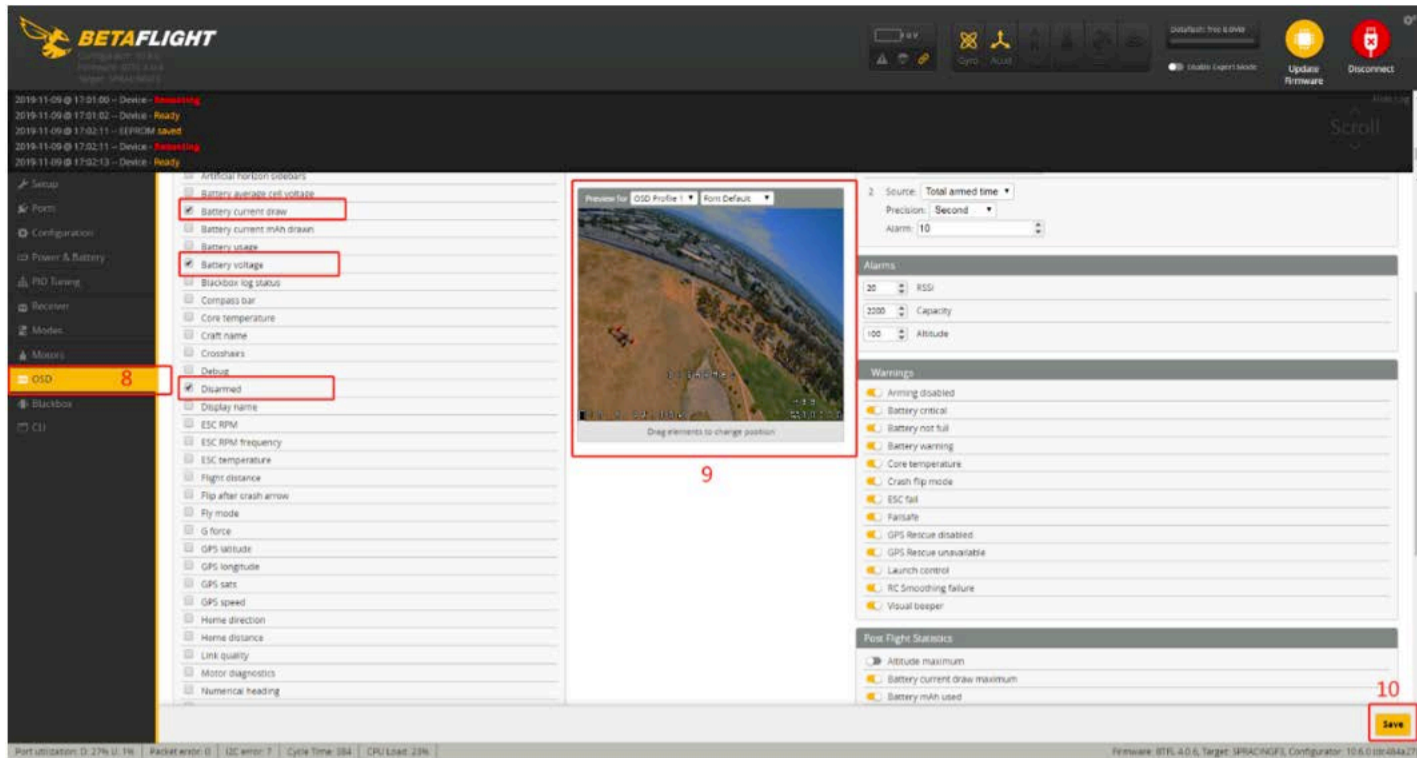

1. Connect the Flight Controller to Betaflight 4.x (MultiWii API version 1.41) or above
2. Select "Ports"
3. Select UART port that is connected with VTX, and set baud rate to 115200.
4. Save

5. Select Configuration
6. Open OSD
7. Save

8. Select "OSD"
9. Select any combination of OSD functions, and drag them to desired positions shown on the simulated OSD.
10. Save

TROUBLESHOOTING

Problem	Possible Problem	Possible Solution
Video recording not working	SD card not set to correct format	Reformat the SD card using the goggles
	Less than 200MB available on the SD card	Replace the card or clear off some space on the card and try again
	Not a solid video signal	Focus on reception first
Poor reception	RC antennas too close to video antennas	Maintain maximum separation between RC antennas and video antennas
	Shadowing of VTX antenna	Try a different VTX antenna with a longer coaxial section to get the active element further from carbon fiber or metal parts
	VTX antenna connection loose	Ensure the VTX antenna and any adapters in use are secured and solidly connected. If the antenna becomes disconnected during operation it will degrade performance and may cause permanent damage to the VTX.
	VTX has entered overheat protection mode	Disconnect power and allow the video transmitter to cool, then reconnect power and try again.
		Improve airflow to the video transmitter RF board in your installation. In unconventional installations with poor ventilation, consider adding a cooling fan to improve air flow.
	Loose antenna connection on video transmitter	Make sure antenna connector is seated securely
Interference from other source of RF	Move goggle away from possible sources of RF interference such as wifi routers, high power transformers, etc	
White dead areas appear on screen	Damage from sunlight	Keep the goggles from being exposed to direct sunlight on the optics to prevent further damage. Contact service for a repair quote. Damage from sunlight is not covered under warranty.

TECHNICAL SUPPORT

NOTE: Support should be attempted in the following order. Initial inquiries to Fat Shark support will expect you to have exhausted the online and retailer resources:

1. Research Fat Shark helpdocs which can be found at <http://fatshark.helpscoutdocs.com/> under **FatShark Troubleshooting**.
2. Contact your retailer for support.
3. Email Fat Shark support. support@fatshark.com

Warranty

The system can be exchanged for a new unit within 7 days for any manufacturing defects if returned in new condition. The video headset will be warrantied for repair for 2 years if there are no signs of excessive use. Buyer will be responsible for shipping costs. If beyond the warranty period, Fat Shark will provide repair services.
